

Sundstrom's comfortable half mask respirator lets you work longer with less effort and better protection, and at less cost. In the farming/ranching and agricultural field. One AG Pack includes everything you need.

Better Protection

Sundstrom's P100 filter eliminates 99.997% of particles. NIOSH only requires 99.97% efficiency. That means our P100 filter is 10 X more effective, providing 10 X better protection.

Greater Comfort and Less Breathing Resistance

Our flexible Thermoplastic Elastomeric (TPE mask fits great. Sundstrom's unique design significantly cuts inhalation and exhalation resistance making the mask twice as easy to breathe through. This increases comfort and lengthens use time.

250% More Air Flow

Our half mask respirator and P100 filter allows breathing rates of more than 250 liters per minute as compared to most competitive products which generally allow only 95 lpm. This means the Sundstrom user can handle much heavier work loads.

Adaptable System

The SR 90-3 half mask respirator can be used with our P100 filter and / or a range of chemical cartridges which can be "piggy-backed" together.

Far Less Cost Over Time

The SR 90-3 is an easy to maintain, clean and disinfect reusable mask. Our distinct pre-filter system prevents premature clogging of the particulate filter and extends filter life up to 5 times longer than competitive products.

Sundström

AG PACK

**Great protection,
comfort and breathability!**

Main features:

- Non-allergenic, FDA approved Thermoplastic Elastomeric (TPE) respirator.
- Very good face seal means a very high protection factor.
- Easily adjustable V-shaped elastic head harness with a large crown plate.
- Unique inhalation and double exhalation valve design provides one-half the breathing resistance of competitive respirators. This means easier breathing and greater respirator compliance.
- Extra large 201 square inch P100 filter area provides extremely low breathing resistance, high air flow and extended filter life.
- High-efficiency P100 particulate filter offers ten times more filter effectiveness than required by NIOSH.
- Pre-filter system collects coarse particles thereby extending the life of the P100 filter.
- Mask can be used with or without supplied chemical cartridge.
- Easily fit tested and fit checked.
- NIOSH approved.
